**RECOMENDATIONS:**

- During the first months of use, there may be a slight sagging of the padding, which means the mattress is adapting to your body structure. This situation is perfectly normal. **To speed up the stabilization of the materials, you should rotate the mattress more frequently.** After this time, you should switch to a rotation every 3 months (see mattress rotation label).
- Colunex products are odorless. When installing the product, only the “new” odor, a natural condition, can be noticed from the opening of the packaging (we recommend aerating the mattress).
- Although all Colunex mattresses have hypoallergenic and antibacterial treatment, **we recommend the use of a mattress protector.**
- If, by accident, you spill liquid on the mattress, place it in an airy place and never turn the wet part downwards.
- All of our materials are subject to the most rigorous conformity tests that guarantee us the final quality of the product. However, for reasons of hygiene and longevity, we recommend that you change the mattress maximum each 15 years.
- **Avoid rotating the mattress alone.** Doing so can result in physical injury or damage to the mattress.
- In models with a removable cover, remove and sanitize it (according to washing rules described on the cover itself), for better ventilation and conservation of the product.
